

CompSci 235-Assignment 2

New Features

- A Wishlist feature

Wishlist

- We implemented a feature that allows the user to add books to a Wishlist in their account. However, this feature can only be used by users when they register an account and login into the site.
- A fundamental design we made to the implementation is that we added a button in the books page for each book and the list of books that pop up after searching for a specific book. This means that we didn't need to display it everywhere and makes it easier for the user to add books to their Wishlist as it would make the site look cleaner and give the user a pleasant experience.
- The benefit of this feature is to give the user an effortless system to keep track of the books they have read and reviewed.
- Unfortunately, due to time constraints we could not implement a feature that allows us to remove books selected by the user in the Wishlist as well as books that they have viewed in the site.
